Australian Standard®

Sustainable Forest Management
This Australian Standard® was prepared by the Standard Reference Committee SRC AS4708 of Australian Forestry Standard Limited. As an accredited Standards Development Organization, Australian Forestry Standard Limited develops and publishes Australian Standards. This Standard was endorsed on behalf of the Council of Standards Australia on 17 May 2013. It was published on 23 August 2013.

The following are represented on the Standards Reference Committee responsible for this Australian Standard®:

- Association of Accredited Certification Bodies (AACB)
- Australian Forest Growers (AFG)
- Australian Forest Products Association (AFPA)
- Australasian Pulp and Paper Industry Technical Association (APPITA)
- Balkanu Cape York Development Corporation.
- Construction Forestry Mining Energy Union (CFMEU)
- Commonwealth Scientific and Industrial Research Organization (CSIRO)
- Ecological Society of Australia (ESA)
- ForestWorks
- Greening Australia Limited
- Independent Forest Policy and Forest Science Experts
- Institute of Foresters Australia (IFA)
- Planet Ark
- Timber Communities Australia (TCA)

Australian Forestry Standard Limited wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee.

Keeping Standards up-to-date

Australian Standards® are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards®, drafts, amendments and new projects can be found by visiting www.standards.org.au.

Australian Standards® developed by Australian Forestry Standard Limited are updated, according to the need by amendments or revision. Australian Forestry Standard Limited welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us by email at info@forestrystandard.org.au or write to PO Box 7031, Yarralumla, ACT 2600.
THIS PAGE IS BLANK
PREFACE

This Standard was prepared by the Standards Reference Committee (SRC4708), a technical committee established for this purpose under the accredited Standards Development Organization – Australian Forestry Standard Limited.

The objective of this Standard is to provide forest managers with environmental, economic, social, and cultural criteria and requirements that support the sustainable management of forests. This Standard, formerly known as the Australian Forestry Standard, was first published as an interim Australian Standard® in 2003 and a full Australian Standard® in 2007. After five years of application the Standard has been reviewed in light of stakeholder expectations, new scientific and technological information, and changes to international norms for sustainable forest management. It has been published as the Australian Standard® for Sustainable Forest Management.

The Standard is intended for voluntary application to any forests being managed for the production of forest products and forest services, whether native or planted forests. It can be utilized by forest managers who are seeking independent, accredited third-party certification of their forest management system and practices. Certification to the Standard is a response to market demands that forest products and forest services come from well managed forests. It aims to support and strengthen policies and regulations that deliver improved environmental, economic, social, and cultural outcomes.

Independent, accredited third-party certification against the Standard provides a clear and unambiguous statement that the production of forest products and forest services within a particular defined forest area is managed in accordance with a set of predetermined and clearly defined environmental, economic, social and cultural performance criteria and requirements that support the sustainable management of forests.

Introduction

Sustainable Forest Management

Sustainable forest management is the management of forests according to the principles of sustainable development. Sustainable development is a pattern of resource use that aims to meet human needs while conserving environmental values, so that these needs can be met not only in the present, but also for generations to come.

Management of forests should use the Precautionary Principle for prevention of environmental degradation and the principle of inter-generational equity to maintain the suite of forest values for present and future generations.

There are four principles to sustainable forest management that are embraced by the Standard:

Environmental sustainability

This entails maintaining and or enhancing:

- the ecological processes within forest ecosystems;
- the forest soil and geological features;
- food chains and energy flows;
- carbon, nutrient and water cycles; and
- the biodiversity of forests,
so as to provide viable and functional forest ecosystems. The forest ecosystem needs to support organisms to reproduce, whilst maintaining its productivity, adaptability and capability for self renewal. Forest management needs to support, and build upon these natural ecological components and processes.

Economic sustainability

This entails optimizing the economic benefits for income, employment, goods and services from the mixture of forest uses within ecological constraints. It requires that benefits to the forest manager exceed the costs incurred, and that some form of equivalent capital is handed down from one generation to the next so that our use of the forest does not preclude utilization options for future generations.

Social sustainability

This entails maintaining and enhancing the net social benefit derived from the mixture of forest uses while maintaining options for the future. This includes sustaining the relationship between ethics, social norms, human rights and development. An activity is socially sustainable if it conforms to ethical values and social norms, upholds human rights standards, and does not exceed a community’s tolerance of change.
Cultural sustainability
This entails maintaining and enhancing the cultural capital of the community. Cultural capital refers to the collective knowledge, wisdom, cultural practices and related environmental assets valued by communities and handed down from generation to generation by various means.

Forest Certification Principles
The Standard is based on the following factors underlying the three principles of:

Governance:
- being independent and impartial, including a clear separation between development of standards and accreditation of certification bodies;
- complying with and where practical exceeding, legal and other requirements; and
- involving competent national accreditation bodies and independent, accredited third party certification bodies.

Quality:
- being scientifically based and involving the scientific community in its development;
- incorporating performance levels at appropriate scales through an open process involving all interested stakeholders;
- being based on the principles of sustainability;
- compatibility with an internationally-recognized environmental management system;
- being easily understood and leading to the same results when used by different certification bodies; and
- being regularly assessed, revised and updated in the light of new knowledge as part of a continual improvement process.

Accessibility:
- having transparent and understandable processes that are accessible to all stakeholders;
- being accessible to stakeholders with a balance of interests;
- being voluntary and including the broad participation of forest managers;
- accommodating all forest types, scales and ownership structures; and
- minimizing costs of certification and not making forest products uneconomical in comparison to other materials.
Use of the Standard

The Standard recognizes that native forests and plantations are managed for a variety of objectives. It sets out specific forest management performance requirements for operations and activities on the defined forest area. It establishes a systematic approach to forest management including requirements for stakeholder engagement. The Standard does not include any criteria related to the fitness of the forest products and forest services for any purpose. As such, it is fundamentally a clear and unambiguous statement that a certified forest product was grown and harvested at a location that was managed in accordance with a set of predetermined and clearly defined environmental, economic, social and cultural performance requirements that support the sustainable management of forests.

The Standard is intended for voluntary application to any forests regardless of size or ownership. It is intended to be compatible with relevant international and national policy instruments, and has been developed with national and international audiences in mind, as well as for implementation by forest managers in a local or regional setting. The Standard also recognizes the importance of meeting both national and international sustainable wood production and marketing requirements, the resource management needs of the industry, as well as promoting voluntary adoption by producers.

The Standard is supported by a guidance document that identifies appropriate approaches to implementation and differentiates between different scales of ownership (size, groups and management regime) and between native forests and plantations.

Forest owners or managers can form group forest certification schemes that can be certified to this Standard. There is a guidance document supporting this application of forest management system certification.

The Standard relates to the management operations and activities within the defined forest area and in relation to product chain of custody whilst the forest products are under the control of the forest manager. Also, some off-site effects of forest management including impacts on stakeholders and adjacent environments are addressed under the Standard.

The Standard is intended to support and strengthen the regulatory framework within which forest managers operate. Compliance with legislation is a minimum requirement. The Standard sets a suite of requirements that support the achievement of sustainable forest management and which may involve going beyond a legal minimum in order to gain benefits from certification.

The Standard does not set site-specific requirements for particular forest types, communities or individual operations as they vary with bioregion and legal jurisdiction. These are addressed under each level of government legal requirements.

There are requirements for researching, monitoring and evaluating the outcomes of management in relation to the forest management performance and stakeholder engagement requirements, and review and continual improvement of the management system.

Certification to the Standard is voluntary and only awarded on the basis of an audit undertaken by an independent third party auditor from an accredited Certification Body.
**Process of Development and Revision**

This Standard has been prepared by the Standard Reference Committee formed for this purpose (SRC4708). The Standard Reference Committee is made up of representatives of a broad range of stakeholders covering environmental, economic, social and cultural interests. They have reviewed comments received during the two public comment phases and have prepared a standard that has been approved as an Australian Standard®.

The requirements of the Standard are derived from certain elements of the International Organization for Standardization (ISO) environmental management system (EMS) Standard AS:NZS ISO 14001:2004, the Montreal Process criteria and indicators for temperate and boreal forests, the Programme for the Endorsement of Forest Certification Schemes’ (PEFC) meta standard for sustainable forest management (PEFC ST 1003:2010), JAS-ANZ Requirements for Bodies Certifying Forest Management Systems and the principles and criteria of the Forest Stewardship Council. The Standard is the forest management standard of the Australian Forest Certification Scheme.

These processes provide a basis for the development of the Standard that is compatible with other national and international schemes and standards that aim to support and achieve sustainable forest management.

**Structure of the Standard**

The Standard consists of:

- an introduction that describes the rationale for a forest management standard; the process for its development including its structure, content, and use; and

- normative requirements and definitions. The Standard is made up of criteria that specify the principles required for sustainable forest management and normative requirements that are audited to demonstrate compliance. Each criterion and requirement is named with a heading and number.

There are two informative supporting guidelines that accompany the Standard. There is a guideline for the application of the Standard and a guideline on the management of group forest certification schemes seeking certification to the Standard. The Guidelines are produced by Australian Forest Standard Limited in consultation with the Standard Reference Committee to assist in the implementation of the Australian Forest Certification Scheme. They are not subjected to the Australian Forestry Standard Ltd processes for creating Australian Standards.
The Standard

Scope

The Standard specifies environmental, economic, social and cultural criteria and system and performance requirements for the production of forest products and forest services that support good practices and continual improvement towards sustainable forest management.

The Standard can be applied to any defined forest area irrespective of scale or type of ownership, or whether native forest or plantation. A forest manager seeking independent, third-party certification, must demonstrate compliance with the requirements of each criterion.

The Standard is supported by a Guideline which provides advice to forest managers and auditors relating to its implementation. This guidance does not create additional normative elements. Rather, it is intended to add clarity through additional information and practical examples where appropriate.

The Standard includes some general requirements that do not relate to sustainable forest management criteria but are required to allow the certification of the forest manager and identify their responsibilities in the chain of custody for forest products obtained from the defined forest area.

Qualifications for Scale and Intensity

The requirements are qualified and are applicable only where relevant to the actual operations of the forest manager and to their defined forest area. The scale and nature of the defined forest area, the scale and nature of the enterprise and the scale and nature of the impacts on the identified aspects of forest management can be considered in the application of the requirements and some will not apply in all cases. Unless the contrary intention appears the singular includes the plural and vice versa.

Normative references

As the Standard has been prepared to include within its requirements all of the elements that must be considered by forest managers without the need for reference to other sources for required elements, there are no normative references.
**Definitions**

For the purpose of the Standard, the definitions below apply.

**aspect**
An element of an enterprise’s activities that can interact with environmental, economic, social or cultural factors and that can affect the outcomes of forest management for the production of forest products and forest services. A significant aspect is one that has, or can have a significant impact.

**assessment**
Process of determining the status or condition of a forest value by a person with technical expertise before or after a forest management activity. It is also undertaken to determine the impact and effectiveness of the forest management activity.

**audit**
A systematic and documented verification process of objectively obtaining and evaluating evidence to determine whether an organization’s management system conforms to forest management performance criteria and requirements of the Standard.

**biodiversity**
The diversity of plants, animals and other living organisms in all their forms and levels of organization, and includes the diversity of genes (or units of heredity), species and ecosystems. It also includes the composition, structure and function of ecosystems and the evolutionary and functional processes that link them.

**bioregion**
Large, geographically distinct areas of land with common characteristics such as geology, landform patterns, climate, ecological features and plant and animal communities. The bioregions for Australia are described in the latest version of the Interim Biogeographic Regionalization for Australia (IBRA).

**carbon cycle**
The biogeochemical cycle by which carbon is exchanged among the living, land and water components, and the atmosphere of the Earth. It describes the movement of carbon as it is recycled and reused throughout the biosphere.

**chain of custody**
The process of tracking wood and forest products originating in sustainably managed forests through all phases of ownership, transportation, and manufacturing from the defined forest area to the final product and delivery to the end consumer.
<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>code of practice</td>
<td>A set of objectives, outcomes, goals or operating procedures designed to control, regulate or govern field activities.</td>
</tr>
<tr>
<td>continual improvement</td>
<td>Process of enhancing the management system to achieve improvements in overall performance in line with the enterprise’s forest management policy through monitoring, evaluation and review.</td>
</tr>
<tr>
<td>crown cover</td>
<td>Area of ground covered by tree canopies, ignoring overlaps and gaps within individual canopies.</td>
</tr>
<tr>
<td>damage agent</td>
<td>A factor that can cause a reduction to forest values or impact on forest ecosystem health and vitality including endemic or exotic species, and physical processes like cyclones and bushfires.</td>
</tr>
<tr>
<td>defined forest area</td>
<td>An area of forest (including land and water) to which the requirements of the Standard are applied. It includes productive and non-productive forest areas, streamside reserves, conservation areas, and roads, etc. The defined forest area is described by survey plans, legal title(s), gazettal notices or GIS shape files, whether as freehold, joint venture, agreement, lease or crown land. The forest manager seeking certification to the Standard will need to demonstrate management control and legal rights over the forest operations in the defined forest area through appropriate agreements or contracts, which allows them to achieve all of the requirements. The forest manager is precluded from omitting elements of its operation which would otherwise be included in its defined forest area from the scope of its certification.</td>
</tr>
<tr>
<td>degraded forest</td>
<td>A forest that has reduced capacity to provide goods and services because it has lost structure, function, species composition and or productivity normally associated with the forest type on that site. A degraded forest requires silvicultural intervention to restore its productivity.</td>
</tr>
<tr>
<td>direct dealing</td>
<td>Conduct by the forest manager which has the effect of undermining, or is likely to undermine, the authority of the representative organization of workers which occurs when the forest manager by-passes the representative organization of workers in order to engage in discussions, bargaining or negotiations with represented forest workers in relation to matters that fall within the scope of collective bargaining without the participation of the representative organization of workers.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>--------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>disturbance regime</td>
<td>A pattern of disturbance events, such as fire or flooding, followed by a period of recovery from the disturbance, e.g. regrowth of a forest after a fire.</td>
</tr>
<tr>
<td>ecological integrity</td>
<td>The ability of the forest ecosystem to support and maintain key ecological processes and a community of organisms with a species composition, diversity and functional organization similar to the natural habitats within the region.</td>
</tr>
<tr>
<td>ecosystem</td>
<td>The aggregate of all living organisms and their interactions with each other and the non-living parts of the environment for a defined place or kind of habitat.</td>
</tr>
<tr>
<td>enterprise</td>
<td>An individual, company, organization, business or firm which exists to undertake forest management.</td>
</tr>
<tr>
<td>environment</td>
<td>Surroundings in which an organization operates, including air, water, land, natural resources, flora, fauna, humans and their interaction.</td>
</tr>
<tr>
<td>equal treatment</td>
<td>The behavior towards forest workers regardless of race, color, sex, sexual preference, age, physical or mental disability, marital status, family or carers responsibilities, pregnancy, religion, political opinion, union membership, national extraction or social origin.</td>
</tr>
<tr>
<td>establishment</td>
<td>The creation of a new forest or plantation arising from the treatment, seeding or the planting of a site with trees.</td>
</tr>
<tr>
<td>extraction track</td>
<td>A track along which logs are transported from the felling point to a nearby landing, loading or aggregation point (also known as a snig or skid track).</td>
</tr>
<tr>
<td>forest</td>
<td>An area of land, incorporating all living and non-living components, that is dominated by trees having usually a single stem and a mature or potentially mature stand height exceeding two metres and crown cover or potential crown cover of overstorey strata about equal to or greater than 20 per cent. This definition includes Australia’s diverse native forests and plantations, regardless of age. It is also sufficiently broad to encompass areas of trees that are sometimes described as woodlands.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>------</td>
<td>------------</td>
</tr>
<tr>
<td>Forest Management Plan</td>
<td>A plan (or a collection of plans, documents or other instruments that have been prepared by, or for, or are available to, the forest manager) that demonstrates compliance with the requirements specified in the Standard for the management of forests within the defined forest area.</td>
</tr>
<tr>
<td>forest management policy</td>
<td>Statement of commitments, intentions and principles in relation to overall forest management which provides a framework for action and setting of objectives and targets.</td>
</tr>
<tr>
<td>forest manager</td>
<td>The person or enterprise with legal control of forest operations within the defined forest area.</td>
</tr>
<tr>
<td>forest operations</td>
<td>A process, method or series of actions, especially of a practical or mechanical nature within a forest related to its management or use for the production of forest products, including but not limited to road construction and/or maintenance, timber harvesting and extraction, stream crossing constructions, non-commercial thinning, slash disposal, site preparation and/or prescribed burning.</td>
</tr>
<tr>
<td>forest products</td>
<td>The physical goods derived from the defined forest area including all wood and non-wood commodities.</td>
</tr>
<tr>
<td>forest services</td>
<td>The environmental, economic, social and cultural benefits derived from the defined forest area including the full range of environmental and ecological services.</td>
</tr>
<tr>
<td>forest type</td>
<td>A classification of forests according to their life form, height of the tallest stratum and the projected foliage cover of the tallest stratum.</td>
</tr>
<tr>
<td>forest worker</td>
<td>A person who carries out work in any capacity for the enterprise.</td>
</tr>
</tbody>
</table>
genetically-modified trees  Trees in which the genetic material has been altered in a way that does not occur naturally by mating and/or natural recombination, taking into account applicable legislation providing a specific definition of genetically modified organisms.

The following techniques are considered as genetic modification resulting in genetically modified trees (EU Directive 2001/18/EC):

- recombinant nucleic acid techniques involving the formation of new combinations of genetic material by the insertion of nucleic acid molecules produced by whatever means outside an organism, into any virus, bacterial plasmid or other vector system and their incorporation into a host organism in which they do not naturally occur, but in which they are capable of continued propagation;

- techniques involving the direct introduction into an organism of heritable material prepared outside the organism including micro-injection, macro-injection, and micro-encapsulation;

- cell fusion (including protoplast fusion) or hybridization techniques where live cells with new combinations of heritable genetic material are formed through the fusion of two or more cells by means of methods that do not occur naturally.

The following techniques are not considered as genetic modification resulting in genetically modified trees:

- in vitro fertilization;

- selective tree breeding;

- natural processes such as, conjugation, transduction, and transformation; and

- polyploidy induction.

greenhouse gases  Those gaseous constituents of the atmosphere, both natural and anthropogenic, that absorb and emit radiation at specific wavelengths within the spectrum of infrared radiation emitted by the Earth’s surface, the atmosphere and clouds. This property causes the greenhouse effect. Water vapor (H₂O), carbon dioxide (CO₂), nitrous oxide (N₂O), methane (CH₄) and ozone (O₃) are the primary greenhouse gases in the Earth’s atmosphere.

group forest certification scheme  A scheme or arrangement managed by a Group Manager on behalf of a Group Entity allowing for the certification of Group Members under one Forest Management Certificate.
growth stages  The stages of ecological succession of a plant community, for example, from young stage to old stage; the characteristic sequence of biotic communities that successively occupy and replace each other, altering in the process some components of the physical environment over time.

impact  Any change to environmental, economic, social or cultural factors, whether adverse or beneficial, wholly or partially resulting from the enterprise’s activities. A significant impact is important, notable, or of consequence, having regard to its context or intensity.

indigenous lands  Areas inhabited and exclusively possessed by indigenous people.

Indigenous people  People who are:

- regarded as indigenous on account of their decent from the populations which inhabited the country at the time of conquest or colonization; or
- tribal and whose social, cultural and economic conditions distinguish them from other sections of the national community and whose status is regulated wholly or partially by their own customs or traditions or by special laws or regulations; or
- of Australian Aboriginal or Torres Strait Islander descent who identify as being of Aboriginal or Torres Strait Islander origin and who are accepted as such by the community with which the people associate.

inventory  The systematic collection of data and forest information for assessment or analysis.

known and potential habitat  An area or areas occupied, or periodically or occasionally occupied, by a species, population or ecological community and includes any biotic or abiotic component, and into which organisms of that kind have the potential to be reintroduced.

monitoring  A systematic, planned series of measurements or observations taken at regular intervals of time to provide the basis for analyzing and reporting changes to implementation, effectiveness and trends.

</table>
| Precautionary Principle | Where there are threats of serious or irreversible environmental damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation. In applying the Precautionary Principle, decisions should be guided by;  
  - scientifically credible evidence of a threat, and  
  - assessing whether the threat is irreversible and/or disproportionate;  
  if so, applying a remedy sufficient to prevent that threat arising, otherwise, making a decision on an assessment of the risk-weighted consequences of various options. |
| productive capacity  | Capacity to produce forest products and forest services. Includes non-wood products and for plantations, alternative crop types. It can be applied to non-market benefits such as ecosystem services. |
| provenance           | A term identifying the original geographic source of seed, pollen, or propagules. |
| regeneration         | New trees arising naturally or with human assistance after harvesting, fire or other causes have removed all or some of the overstorey. |
| region               | An area considered as a unit for geographical, functional, social or cultural reasons; an administrative division of a country. |
| riparian zone        | An area, usually of linear configuration, that is geographically and ecologically associated with a river, stream or wetland. |
| rotation             | The planned number of years between regeneration or planting and the subsequent harvesting of a stand of trees. |
Significant Biodiversity Values

Any of the following natural values:

- known or likely occurrences of threatened, vulnerable, rare, or endangered species, populations and their known and potential habitat; and/or as listed on current schedules of relevant legislation;
- threatened, vulnerable, rare and endangered ecological communities or ecosystems and/or as listed on current schedules of relevant legislation;
- regionally or nationally significant concentrations of biodiversity;
- disjunct or outlier populations, refugia and centres of endemism;
- old-growth forest which is rare or depleted within the forest type (generally less than 10% of the extant distribution);
- ecosystems that are currently reserved at less than 15% of their pre-European distribution or equivalent benchmark time;
- forest types or ecosystems and old-growth forest which are rare, depleted or under-represented in the regional conservation reserve system;
- habitat of migratory species listed under the relevant legislation; or
- Natural Heritage Places.

silviculture

The science and practice of controlling the establishment, growth, composition, health and quality of forests and woodlands to meet the diverse needs and values of landowners and society.

silvicultural system

A planned program of treatments throughout the life of a stand to achieve stand structural objectives, for the production of forest products and forest services or other values based on integrated resource management goals. A silvicultural system includes harvesting, regeneration and stand-tending methods or phases. It covers all activities for the entire length of a rotation or cutting cycle.

site

The area in which a plant or stand grows, considered in terms of its environment, particularly as this determines the type and quality of the vegetation the area can carry.

social benefit

The non-monetary and rarely calculable benefits to society arising from forms of un-priced economic activity.
stakeholder
There are two types of stakeholders included in this definition. Interested stakeholders are groups and individuals who have environmental, economic, social, cultural interests in the management of the defined forest area. Affected stakeholders are individuals or groups directly impacted by the enterprise’s activities.

Stakeholder Engagement Plan
A plan or a collection of plans, documents or other instruments that have been prepared by, or for, or are available to, the forest manager that demonstrates compliance with the requirements specified in the Standard for proactive engagement with stakeholders.

stand
A distinguishable unit of forest consisting of trees sufficiently uniform in species composition, structure, and growing on a sufficiently uniform site.

structural elements
The components of habitat determined by their location and arrangement such as standing and fallen dead wood, hollow bearing trees, rocks and caves.

sustainable yield
The sustainable yield is a schedule of planned wood flows to be harvested over an extended planning period in order to meet the objectives of the organization subject to;

- applying the relevant contractual and other supply commitments, silvicultural regimes, operational and social considerations;
- maintaining management and protection of the estate during any intervals in which wood flows cease or are markedly reduced;
- ensuring that, at the end of the planning period, the forest as a whole is left in a better, or at least as good a, condition for future generations as at the start of the planning period, in terms of relevant metrics for productive capacity and other values; and
- conducting periodic reviews to update the forest inventory and re-calculate sustainable yield, especially in order to adapt the Forest Management Plan to any unexpected changes since the last review.

thinning
A silvicultural treatment made to reduce the stand density of trees to generate a financial return for the forest manager, to improve growth, enhance forest health, and or recover potential mortality.
threatening process A process that threatens, or may threaten, the survival, abundance or evolutionary development of a native species or ecological community including processes listed on current schedules of relevant Commonwealth, State or Territory legislation.

current uses Legal and authorized uses with a long habitual or customary history.

**Forest management criteria and requirements**

The Standard defines sustainable forest management according to a set of nine criteria. Criterion 1 addresses a management system for the enterprise. Criterion 2 addresses stakeholder engagement, and the remaining criteria address forest management performance. For each criterion, the Standard establishes a number of requirements that must be met in order to achieve and maintain certification. There are two General Requirements that need to be achieved and maintained for an enterprise to be certified to the Standard. These are listed below.

This approach enables and encourages continual improvement to forest management operations and outcomes based on learning and experience. It recognizes that forests will change over time due to human activities and natural processes, and requires management to be adapted as our understanding of the relationship between management actions and forest values improves. While the Standard separates the key forest values and sets particular performance requirements for them, it is recognized that they are interconnected and should not be considered in isolation.
### General Requirements

#### 0.1 Defined Forest Area

1. The forest manager shall define the area of forest to which the Standard applies and demonstrate management control over forest operations through appropriate agreements or contracts, for the purpose of the requirements of the Standard.

2. The forest manager shall:
   a. describe, record and map the defined forest area and maintain and regularly update a register of all separately described titles, schedules, blocks, compartments, coupes or other land components;
   b. monitor and document any changes to the defined forest area; and
   c. make the maps of the defined forest area (at a scale not smaller than 1:250,000) publicly available.

#### 0.2 Chain of Custody

1. The forest manager shall ensure that forest products and services that are sold or supplied as ‘certified’ are identifiable as originating from the defined forest area by the provision of appropriate documentation.

2. The forest manager shall:
   a. describe the processes relating to the transport and handling of forest products up to the point of sale or transfer; and
   b. demonstrate control of the forest products up to the point of sale or transfer.
**Criterion 1 – Systematic Management**

Forest management shall be undertaken in a systematic manner appropriate to the nature and scale of the enterprise and provide for continual improvement.

| 1.1 POLICY | 1. The forest manager shall define a forest management policy that includes commitments to:  
|            | a. a systematic approach to forest management;  
|            | b. continual improvement in performance outcomes;  
|            | c. compliance with relevant legislation and other external requirements to which the forest manager subscribes including the requirements of the Standard;  
|            | d. provision of resources necessary to meet the Standard;  
|            | e. a process of regular review of the forest management system; and  
|            | f. proactive engagement with stakeholders. |

| 1.2 FOREST MANAGEMENT PLAN | 1. The forest manager shall have a Forest Management Plan that delivers the policy commitments.  
|                           | 2. The Forest Management Plan shall:  
|                           | a. identify applicable legal requirements and other requirements to which the forest manager subscribes;  
|                           | b. identify and assesses the significance of specific aspects and impacts of activities relevant to the requirements of the Standard;  
|                           | c. set forest management objectives, targets and monitoring processes for identified significant impacts relevant to the requirements of the Standard;  
|                           | d. demonstrate consideration of stakeholder input;  
|                           | e. state the scope and objectives of forest management;  
|                           | f. include a description of the forest including current condition and inventory results and forecasts;  
|                           | g. describe the forest values to be managed, including those important for the protection of environmental, economic, social and cultural benefits;  
|                           | h. describe and provide a rationale for silvicultural regimes; and  
|                           | i. describe the relevant operating conditions and controls for specified activities. |

| 1.3 IMPLEMENTATION | 1. The forest manager shall implement a management system to deliver the Forest Management Plan that is based on, inventory, planning, implementation, monitoring, evaluation and review processes. |
2. The forest manager shall ensure that:
   a. evidence of a legal right to manage the forests within the defined forest area is maintained;
   b. operational plans, procedures, guidelines and other documented controls are in place and effective in achieving legal and other requirements, the requirements of the Standard and the forest management objectives and targets set for significant impacts;
   c. roles and responsibilities are defined and assigned and there are sufficient resources and other capacity to implement the management system;
   d. staff and contractors have required competencies to implement the management system;
   e. forest operations make best use of natural structures and processes, provide adequate genetic, species and structural diversity, and use preventative biological measures to maintain and enhance the health and vitality of forests wherever is economically feasible;
   f. procedures for communication, document management and record keeping are established and maintained; and
   g. contingency/emergency plans are in place to respond to and manage accidents and emergency situations and that these plans are periodically tested.

1.4 MONITORING AND CORRECTIVE ACTIONS

1. The forest manager shall monitor and evaluate activities and their outcomes to ensure that requirements of the Standard are met.

2. The forest manager shall implement measures to correct identified deficiencies and to prevent repeat occurrences, to support continual improvement in performance outcomes.

3. The forest manager shall ensure procedures are in place for:
   a. checking operational plans and practices for compliance with legislation, codes of practice, regional and local prescriptions, guidelines and other relevant controls;
   b. monitoring and auditing of forest operations for conformance with planned practices and to ensure that the requirements of the Standard are met;
   c. routine monitoring and evaluation of the performance outcomes using approaches that are as scientifically-rigorous and sufficiently powerful as is possible and practical and that allow timely remedial actions to be applied when requirements of the Standard are not met; and
   d. periodically auditing of the management system to determine conformance with the requirements of the Standard and that planned practices have been properly implemented and maintained.
#### 1.5 REVIEW

1. The forest manager shall periodically review and where necessary modify the management system and its procedures to ensure continuing suitability, adequacy and effectiveness and to ensure continual improvement in performance outcomes.

2. The review shall include:
   a. the results of auditing and monitoring of forest operations and activities;
   b. monitoring and feedback mechanisms, including the adequacy of monitoring activities; and
   c. policies, the Forest Management Plan, the Stakeholder Engagement Plan, other plans, objectives and targets, stakeholder interactions, research findings and changes to other elements of the management systems to meet changing circumstances, new information and the commitment to continual improvement.

3. The forest manager shall keep a record of the review and document any changes to management and performance outcomes.

#### 1.6 RESEARCH

1. The forest manager shall base forest management on the results of current and ongoing scientific research where available and other sources of information including but not limited to expert opinion, ecological theory and practical experience.

2. The forest manager shall contribute to research activities and data collection needed for sustainable forest management or support relevant research activities carried out by other organizations.
**Criterion 2 – Stakeholders**

Forest management shall demonstrate proactive stakeholder engagement

<table>
<thead>
<tr>
<th>2.1 IDENTIFY STAKEHOLDERS</th>
<th>1. The forest manager shall establish and maintain a list of stakeholders and identify their interests and whether they are affected or interested stakeholders.</th>
</tr>
</thead>
</table>
| 2.2 STAKEHOLDER ENGAGEMENT PLAN | 1. The forest manager shall establish and maintain a Stakeholder Engagement Plan that:  
   a. acknowledges the positive contribution that stakeholder perspectives and expertise make to forest management;  
   b. includes an evaluation of the direct effects of forest management on stakeholders;  
   c. includes an evaluation of stakeholder feedback on the impacts associated with forest management;  
   d. describes how stakeholder feedback is sought, considered, and recorded;  
   e. recognizes the different needs of affected and interested stakeholders;  
   f. identifies what information shall be made publicly available;  
   g. describes processes for managing complaints and dispute resolution mechanisms; and  
   h. ensures that stakeholder views are considered in the development and periodic review of the Forest Management Plan. |
| 2.3 STAKEHOLDER PARTICIPATION | 1. The forest manager shall facilitate and encourage meaningful engagement of stakeholders by:  
   a. providing appropriate opportunities for stakeholders to make their views known on forest management and to influence decision-making;  
   b. providing ways for stakeholders’ views to be considered and incorporated in Forest Management Plans; and  
   c. addressing complaints, disputes and grievances in a timely manner. |
| 2.4 STAKEHOLDERS AFFECTED BY FOREST OPERATIONS | 1. The forest manager shall strive to build constructive relationships with affected stakeholders including:
   a. consideration of the impacts of planned forest operations on affected stakeholders;
   b. timely notification to affected stakeholders that may be directly affected by planned forest operations prior to their commencement;
   c. taking actions to mitigate adverse impacts on affected stakeholders; and
   d. communication of the long term environmental, economic, social and cultural benefits of sustainable forest management. |
| 2.5 RECORDS | 1. The forest manager shall maintain records of communication with stakeholders in accordance with their Stakeholder Engagement Plan including outcomes of all complaints, disputes and grievances. |
| 2.6 PUBLIC DISCLOSURES | 1. The forest manager shall make publicly available summaries of:
   a. the Forest Management Plan; and
   b. the audit reports provided by the certification body. |
**Criterion 3 – Biodiversity**

Forest management shall maintain or enhance biodiversity.

| 3.1 IDENTIFY BIODIVERSITY PRIORITIES | 1. The forest manager shall identify biodiversity including structural elements within the defined forest area.  
2. The forest manager shall identify biodiversity priorities for maintenance and or enhancement within the defined forest area. |
| 3.2 MAINTAIN OR ENHANCE BIODIVERSITY | 1. The forest manager shall manage forests to progressively establish and maintain a distribution of forest cover, stand structural elements and growth stages that is demonstrated to support the maintenance or enhancement of biodiversity priorities.  
2. The forest manager shall take action to address threatening processes affecting or likely to affect the defined forest area. |
| 3.3 IDENTIFY SIGNIFICANT BIODIVERSITY VALUES | 1. The forest manager shall identify the Significant Biodiversity Values within the defined forest area.  
2. The assessment of the significance of biodiversity shall be based on existing knowledge, research results, the biodiversity regulatory frameworks and relevant forest planning instruments and shall be assessed in a bioregion. |
| 3.4 MAINTAIN OR ENHANCE SIGNIFICANT BIODIVERSITY VALUES | 1. The forest manager shall implement effective strategies, practices and other controls to support the maintenance or enhancement of Significant Biodiversity Values.  
2. The forest manager shall minimize any adverse impacts of forest operations on Significant Biodiversity Values by planning and implementing forest operations consistent with those actions specified in relevant recovery, action or threat abatement plans, codes of practice and prescriptions, recognized interim guidelines or other instruments and take account of known information and relevant specialist advice.  
3. The forest manager shall develop and implement a plan to enhance the capacity of the forest to support Significant Biodiversity Values, where they exist and have been diminished or degraded. |
| 3.5 MONITOR BIODIVERSITY | 1. The forest manager shall monitor biodiversity priorities, using a scientifically based monitoring methodology developed in consultation with stakeholders and relevant experts, to determine if values are being maintained or enhanced within the defined forest area. Biodiversity priorities for monitoring will be clearly described and quantified, and be drawn from general biodiversity, structural elements and or Significant Biodiversity Values.  
2. The forest manager shall document the biodiversity monitoring objectives and include a description of how the monitoring results will be used to evaluate the effectiveness of the forest management biodiversity objectives set in the Forest Management Plan. |
### 3.6 Reviews of Biodiversity

1. The forest manager shall periodically review and reassess the biodiversity priorities using monitoring results and other relevant information.

### 3.7 Regeneration

1. The forest manager shall regenerate native vegetation with species and provenances native to the area, or from an equivalent locality, as far as reasonably practicable, to maintain local gene pools and species mixes.

### 3.8 Introduced Genetics

1. The forest manager shall evaluate the impact of species, provenances or populations established in plantations, and constrain their spread in circumstances where a risk to the ecological integrity of adjacent native vegetation has been identified.

2. The forest manager shall not use genetically-modified trees.

3. The forest manager shall manage plantations to develop and implement strategies to minimize the risk and consequences of genetic pollution from pollen flow between plantations and native forest species. The strategies will consider the conservation status of any adjacent forest ecosystem or gene pool, the probability that pollen-mediated gene flow will occur, and the impact that such gene flow is likely to have on any adjacent population or forest ecosystem.

4. The forest manager shall implement measures to minimize and control the escape of plantation species into areas outside the defined forest area.
1. The forest manager shall not convert native vegetation to plantation or to non-forest except in the limited circumstances outlined below:
   a. infrastructure development required by the Forest Management Plan; or
   b. the establishment of practical operational units of a plantation, re-alignment of boundaries for subsequent rotations and incorporation of new areas within the defined forest area limited to an area of 5 per cent up to a maximum of 5 hectares of a single forest operation and limited to a total per annum of 5 hectares or 1% of the annual harvest area.

2. The forest manager shall, in all of these circumstances above:
   a. ensure that native vegetation conversion occurs only where it does not involve occurrences of Significant Biodiversity Values or areas of native vegetation that are part of recognized offsets; and
   b. commit to and demonstrate an offset process to effectively balance the environmental outcomes of the native vegetation conversion for relevant environmental values.

3. The forest manager shall demonstrate that the enterprise was not directly or indirectly responsible for the conversion of native vegetation to plantations after 31 December 2006, except where conversion operations had commenced prior to that date.
**Criterion 4 – Forest Productive Capacity**

Forest management shall maintain the productive capacity of forests and land.

<table>
<thead>
<tr>
<th>4.1 IDENTIFY PRODUCTIVE CAPACITY</th>
<th>1. The forest manager shall identify existing and potential productive uses of the defined forest area to support the maintenance of the long term productive capacity of the forest.</th>
</tr>
</thead>
</table>
| 4.2 IDENTIFY HARVEST RATES       | 1. The forest manager shall identify harvesting rates for forest products commensurate with the long term productive capacity of the forest and shall consider:  
   a. structure and condition of the forest;  
   b. estimates of sustainable yield;  
   c. social impacts;  
   d. markets;  
   e. optimal use of the defined forest area; and  
   f. ability to manage planting, regeneration or establishment programs. |
| 4.3 PLAN AND MONITOR USE          | 1. The forest manager shall plan operations to ensure the productive capacity of the forest is not compromised.  
   2. The forest manager shall monitor forest condition, growth and harvest rates.  
   3. The forest manager shall manage plantations to ensure that planning considers the selection of suitable species for plantation establishment appropriate to each site. |
| 4.4 INFRA-STRUCTURE               | 1. The forest manager shall plan, establish and maintain adequate infrastructure such as roads and bridges to ensure efficient delivery of forest products while minimizing negative impacts on the environment. |
| 4.5 SILVICULTURE                  | 1. The forest manager shall demonstrate that silvicultural systems are appropriate for:  
   a. the forest type;  
   b. the specific stand and site conditions;  
   c. forest management requirements;  
   d. biodiversity priorities;  
   e. market conditions; and  
   f. product requirements. |

</table>
**Criterion 5 – Forest Ecosystem Health**

Forest management shall maintain forest ecosystem health and vitality.

<table>
<thead>
<tr>
<th>5.1 IDENTIFY DAMAGE AGENTS</th>
<th>1. The forest manager shall identify and assess potential damage agents that could impact forest ecosystem health and vitality.</th>
</tr>
</thead>
</table>
| 5.2 MAINTAIN HEALTH          | 1. The forest manager shall prioritize, plan, and implement practices to support the maintenance of forest ecosystem health and vitality.  
2. The forest manager shall plan to ensure that damage resulting from forest operations stays within tolerable levels and degradation is minimized.  
3. The forest manager shall monitor forest health and take action to control or eradicate damage agents. |
| 5.3 WEEDS AND PESTS          | 1. The forest manager shall identify exotic and endemic weed species and pest animals and take action to control or eradicate them within the defined forest area.  
2. The forest manager shall take action to constrain the spread of weeds and pests.  
3. The forest manager shall periodically evaluate the effectiveness of such control actions and modify the control methods where necessary. |
| 5.4 FIRE AND DISTURBANCE REGIMES | 1. The forest manager shall manage fire and other disturbance regimes within native forests to maintain or enhance forest ecosystem health.  
2. The forest manager shall periodically review the contribution of the disturbance regime to the maintenance of forest ecosystem health and vitality within native forests.  
3. The forest manager shall use the results of the review to adjust the disturbance regime where necessary to increase its effectiveness. |
| 5.5 REHABILITATE DEGRADED FOREST | 1. The forest manager shall identify sites within the defined forest area that are degraded and facilitate a prioritized program for the rehabilitation of degraded forests. |
| 5.6 CHEMICAL USE             | 1. The forest manager shall minimize the use of chemicals and any adverse impacts arising from their use.  
2. The forest manager shall not use World Health Organization Class Ia and Ib pesticides unless legally approved for use.  
### 5.7 DAMAGE AGENT SALVAGE OPERATIONS

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>

</thead>
<tbody>
<tr>
<td>1.</td>
<td>The forest manager may conduct salvage operations to recover forest products from forests within the defined forest area that have been affected by damage agents.</td>
</tr>
<tr>
<td>2.</td>
<td>The forest manager shall exclude all reserve areas within the defined forest area from salvage operations except where required for safety, fire management, rehabilitation or other justified reasons. Areas subject to these exceptional circumstances shall have additional stringent conditions to recognize the values in the reserves.</td>
</tr>
<tr>
<td>3.</td>
<td>The forest manager shall ensure that the planning and implementation of salvage operations is carried out in a manner that maintains remaining Significant Biodiversity Values.</td>
</tr>
<tr>
<td>4.</td>
<td>The forest manager shall, where opportunities exist, retain biological legacies and stand structural elements on affected areas including variations in the intensity of salvage logging, retaining a range of growth stages to maintain biodiversity values within the affected area, and minimizing the level of physical disturbance on regenerating areas.</td>
</tr>
<tr>
<td>5.</td>
<td>The forest manager shall ensure that salvage operations are carried out consistent with the requirements of the Standard.</td>
</tr>
</tbody>
</table>
**Criterion 6 – Soil and Water Resources**

Forest management shall protect soil and water resources.

<table>
<thead>
<tr>
<th>6.1 IDENTIFY SOIL AND WATER VALUES</th>
<th>1. The forest manager shall identify and assess the soil and water values that can be adversely affected by forest operations.</th>
</tr>
</thead>
</table>
| 6.2 WATER QUALITY                 | 1. The forest manager shall manage forest operations to minimize adverse changes to water quality (physical, chemical or biological) with the objectives of:  
   a. minimizing transport of soil into waterways;  
   b. maintaining streamside management zones; and  
   c. designing, constructing and maintaining temporary and permanent roads and crossings of waterways to recognized standards intended to minimize degradation of water quality. |
| 6.3 WATER QUANTITY                | 1. The forest manager shall manage forest operations to ensure hydrological flows are in accordance with regulated catchment goals where they exist.  
   2. The forest manager shall minimize adverse impacts of changes in hydrological flows by ensuring that:  
      a. both long term and short term disturbances to hydrological flows relative to the existing situation are considered; and  
      b. the environmental impacts of both increased and reduced hydrological flows are considered. |
| 6.4 SOIL PROPERTIES               | 1. The forest manager shall manage forest operations to minimize nutrient losses.  
   2. The forest manager shall manage forest operations to protect and maintain the physical, chemical and biological properties of soil and improve those properties where appropriate and reasonably practicable.  
   3. The forest manager shall:  
      a. minimize the extent of land exposed to major soil disturbance during harvesting operations;  
      b. ensure that soil disturbance does not exceed that specified in relevant codes and equivalent instruments or operational guidelines; and  
      c. promptly rehabilitate extraction tracks, temporary roads and product storage areas with appropriate techniques including re-vegetation and drainage.  
   4. The forest manager shall demonstrate the use of soil conservation techniques that aim to maintain soil properties in the long term. |
| 6.5 POLLUTION | 1. The forest manager shall manage forest operations to prevent or constrain water pollution and soil contamination, and take reasonable actions to ensure that:  
  a. unacceptably high levels of chemicals from applications are not transported into waterways;  
  b. disposal of waste fuels, lubricants and chemicals is carried out to avoid water pollution and soil contamination; and  
  c. any spills are promptly contained and affected areas appropriately remediated. |
**Criterion 7 – Carbon**

Forest management shall maintain or enhance forests' contribution to the carbon cycle

<table>
<thead>
<tr>
<th>7.1 CARBON CYCLE</th>
<th>1. The forest manager shall manage the forest within the defined forest area to maintain or enhance its contribution to carbon cycles.</th>
</tr>
</thead>
<tbody>
<tr>
<td>7.2 MINIMIZE FOSSIL FUEL USE</td>
<td>1. The forest manager shall demonstrate a commitment to minimizing fossil fuels usage by forest operations and in the conduct of the enterprise.</td>
</tr>
<tr>
<td>7.3 MEASUREMENT OF CARBON STORAGE</td>
<td>1. The forest manager shall have a quantitative estimate of the current and future carbon storage on the defined forest area.</td>
</tr>
</tbody>
</table>

### Criterion 8 – Cultural Values

Forest management shall protect and maintain, for Indigenous and non-Indigenous people, their natural, cultural, social, recreational, religious and spiritual heritage values.

<table>
<thead>
<tr>
<th>8.1</th>
<th>INDIGENOUS PEOPLES’ VALUES</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>The forest manager shall recognize the rights, responsibilities and values of Indigenous people based on their recognized prior ownership of the forests and land.</td>
</tr>
<tr>
<td>2.</td>
<td>On land within the defined forest area where these rights remain, this shall include:</td>
</tr>
<tr>
<td></td>
<td>a. providing for Indigenous people’s input into decision making;</td>
</tr>
<tr>
<td></td>
<td>b. applying Indigenous people’s knowledge of sustainable development and management of forests to the defined forest area;</td>
</tr>
<tr>
<td></td>
<td>c. supporting education and promotion to the wider community of Indigenous people’s rights and interests in and values of forests;</td>
</tr>
<tr>
<td></td>
<td>d. supporting Indigenous people’s economic and social aspirations in sharing benefits from the management of forests; and</td>
</tr>
<tr>
<td></td>
<td>e. respecting Indigenous people’s cultural and traditional customs.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>8.2</th>
<th>INDIGENOUS HERITAGE VALUES</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>The forest manager shall protect and maintain Indigenous people’s cultural, religious, spiritual and social heritage values through the identification of known values.</td>
</tr>
<tr>
<td>2.</td>
<td>The forest manager shall consult with the relevant Indigenous people to:</td>
</tr>
<tr>
<td></td>
<td>a. identify and assess the significance of Indigenous peoples  heritage values;</td>
</tr>
<tr>
<td></td>
<td>b. consider their views in the preparation and review of the Forest Management Plan; and</td>
</tr>
<tr>
<td></td>
<td>c. avoid damage to significant values during forest operations.</td>

</tbody>
</table>

<table>
<thead>
<tr>
<th>8.3</th>
<th>OTHER HERITAGE VALUES</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>The forest manager shall assess the significance of cultural, religious, spiritual and social heritage values in a regional context based on relevant heritage studies and forest planning instruments.</td>
</tr>
<tr>
<td>2.</td>
<td>The forest manager shall protect and maintain significant heritage values.</td>
</tr>
<tr>
<td>3.</td>
<td>The forest manager shall consider significant heritage values in the preparation and review of the Forest Management Plan.</td>
</tr>
<tr>
<td>4.</td>
<td>The forest manager shall implement actions in consultation with the appropriate bodies to avoid damage to significant heritage values during forest operations.</td>
</tr>
</tbody>
</table>
| 8.4 LEGAL AND TRADITIONAL USES | 1. The forest manager shall allow existing legal and traditional uses of the forests to continue within the defined forest area.  
2. The forest manager shall pursue negotiated outcomes with recognized and affected parties, where such uses threaten the condition of the forests or the achievement of the forest management performance requirements. |
### Criterion 9 – Social and Economic Benefits

Forest management shall maintain and enhance long-term social and economic benefits.

| 9.1 REGIONAL DEVELOPMENT | 1. The forest manager shall:  
|                          | a. identify opportunities that allow the forests within the defined forest area to play an environmental, economic, social, and cultural role in rural and regional development;  
|                          | b. support regional industry and regional communities, including commitments to local procurement where possible and fair contracts with suppliers of goods and services. |

| 9.2 OPTIMAL USE | 1. The forest manager shall pursue the efficient and optimal use of harvested forest products to encourage best use of forests within the defined forest area having due regard to the environmental, economic, social and cultural requirements of the Standard.  
|                 | 2. The recovery and value adding of otherwise wasted forest products shall be encouraged wherever possible. |

| 9.3 ILLEGAL ACTIVITIES | 1. The forest manager shall take action to prevent unauthorized or illegal activities within the defined forest area where practical. |

| 9.4 SKILLS DEVELOPMENT | 1. The forest manager shall:  
|                         | a. identify opportunities to support employment and skills development of forest workers including, but not limited to, nationally endorsed and or recognized competencies and qualifications where appropriate; and  
|                         | b. implement identified opportunities for forest workers through appropriate development actions. |

| 9.5 HEALTH AND SAFETY | 1. The forest manager shall foster a safe working environment by:  
|                       | a. complying with relevant workplace health and safety legislation and regulations;  
|                       | b. facilitating improvements in workplace health and safety;  
|                       | c. adopting working conditions that do not endanger health or safety; and  
<p>|                       | d. co-operating and consulting with forest workers and their representative organizations where they exist, on workplace health and safety. |</p>
<table>
<thead>
<tr>
<th>WORKERS’ RIGHTS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>9.6</strong></td>
</tr>
</tbody>
</table>

1. The forest manager shall recognize the rights of forest workers to:
   a. join a union or organization of workers;
   b. participate in collective bargaining; and
   c. associate freely.

2. The forest manager shall:
   a. support equal employment opportunities and use qualifications, skill, experience and merit as the basis for recruitment and advancement of forest workers; and
   b. ensure that all forest workers are afforded equal treatment.

3. The forest manager shall demonstrate that:
   a. where it engages in collective bargaining, such bargaining:
      i. takes place with representative workers’ organizations where they exist;
      ii. does not involve direct dealing;
      iii. takes place in good faith; and
      iv. involves the forest manager’s best efforts to reach agreement;
   b. representatives of organizations of forest workers have access to employees in the workplace and have the use of such facilities in the workplace as are necessary for the proper exercise of their functions as workers representatives;
   c. all forest workers are engaged freely and are duly compensated;
   d. all forest workers are greater in age than the completion of compulsory school attendance age; and
   e. it is in compliance with legal obligations creating minimum employee entitlements including but not limited to those set out in national legislation and collective bargaining agreements.
THIS PAGE IS BLANK
Australian Forestry Standard Limited
Australian Forestry Standard Limited (AFS Ltd) is a not-for-profit public company and an accredited Standards Development Organization. It owns and manages two Australian Standards®, AS4708 Sustainable Forest Management and AS4707 Chain of custody for certified wood and forest products. These Standards are key components of the Australian Forest Certification Scheme which is operated by AFS Ltd to support and encourage good forest management and to provide information to users of wood and paper products about the source of those products.

Standards Australia
Standards Australia is an independent company, limited by guarantee, which prepares and publishes most of the voluntary technical and commercial standards used in Australia. These standards are developed through an open process of consultation and consensus, in which all interested parties are invited to participate. Through a Memorandum of Understanding with the Commonwealth government, Standards Australia is recognized as Australia’s peak national standards body.

Australian Standards
Australian Standards are prepared by committees of experts from industry, governments, consumers and other relevant sectors. The requirements or recommendations contained in published Standards are a consensus of the views of representative interests and also take account of comments received from other sources. They reflect the latest scientific and industry experience. Australian Standards are kept under continuous review after publication and are updated regularly to take account of changing technology.

International Involvement
Standards Australia is responsible for ensuring that the Australian viewpoint is considered in the formulation of international Standards and that the latest international experience is incorporated in national Standards. This role is vital in assisting local industry to compete in international markets. Standards Australia represents Australia at both ISO (The International Organization for Standardization) and the International Electrotechnical Commission (IEC).

Electronic Standards
All Australian Standards are available in electronic editions, either downloaded individually from SAI Global, or via on-line and CD ROM subscription services. For more information phone 131 242 or visit www.saiglobal.com.
